E-mail: AJsChs@aol.com

Description: Two high quality, air-dried blood smears were submitted for hematologic examination. Following Diff Quik staining and microscopic examination, all granulocytes have segmented or well lobulated nuclei that are consistent with a normal phenotype. There is no evidence of Pelger-Huët anomaly.

Diagnosis: Negative for Pelger-Huët anomaly (normal granulocyte phenotype).

Comment: Hematologic changes consistent with Pelger-Huët anomaly are not observed in the stained blood smear. Please contact Dr. Latimer at latimer49@gmail.com if you have additional questions concerning this test result.
